My Files Features

+ Add

Description

- Display Client workdrive on the screen
- Folders and documents are displayed in two columns.
- Page is scrollable, If folders or documents don't all appear on the page user can scroll to view.
- Implement Pull to refresh file and folder list

Document Icons

.txt, .doc, .docx, .zwriter, .pdf, .png, .jpeg, .jpg, .xls, .xlsx, .zsheet

Test Result:

While testing the mobile app build using **Expo Go** on my physical device, I encountered a runtime error that caused the application to crash. Specifically, the error was related to an undefined object in the `userDataContext`, where the code attempted to access a property (`contact_data.contact_id`) that did not exist at the time of rendering. The issue appears to be related to either the API response not returning the expected structure or a failure in handling asynchronous data properly before rendering the `ProfileImage` component.
